Instance Created: July 29, 2001

Number of Cities: 194

Optimal Value: 9352

Solved: July 30, 2001

Solution Method: concorde (default settings), QSopt LP solver

Solution Time: 2.09 seconds, AMD Athlon 1.33 GHz

Notes

1. [Concorde](#) is our linear-programming based TSP solver.
2. [linkern](#) is an implementation of Martin, Otto, and Felten's Chained Lin-Kernighan heuristic. It is included in the Concorde code.
3. [LKH](#) is Keld Helsgaun's powerful implementation of the Lin-Kernighan heuristic.
